

Manure Master™ Conditioner

A dry manure detoxifying & biological stimulant technology

Manure Master Conditioner's main function is to tie-up toxins in the manure that slows manure microbial digestion. Treating manure with **Manure Master Conditioner** helps reduce pathogens by stimulating beneficial microbes, reducing ammonia release and overall odor, as well as increase decomposition, phosphorus/nitrogen retention and availability. It also aids in the reduction or elimination of top solids and bottom sludge.

It is recommended to use **Manure Master Conditioner** in conjunction with **Manure Master™ Plus-PA** or **Manure Master Plus-Organic**.

Treatment Protocol:

- **Swine Manure:** 500 lbs per million annually.
Apply 100 lbs to start and remaining 400 lbs as needed throughout the year (4 treatments).
- **Dairy/Beef:** 1,100 lbs per million annually.
Apply 100 lbs to start and 100 lbs monthly or as needed throughout the year (10 treatments).

It is recommended to apply Manure Master Conditioner over the top of the manure, then apply Manure Master Plus-PA or Manure Master Plus-Organic over the Manure Master Conditioner. It's best to mix into the liquid portion of the manure. Agitation after treatment will enhance the manure digestion. Both products can also be applied in the loadout or manure induction pump.

INGREDIENTS: Naturally-occurring, unaltered oxidized lignite.

ENVIRONMENTAL IMPACT

The premicrobial digestion of liquid manure that has been treated with Manure Master Plus-PA/Manure Master Plus-Organic and Manure Master Conditioner, before field application, may improve soil health and help reduce the likelihood of water quality issues. 100% natural. Safe for animals.

ORGANIC CERTIFICATION

Manure Master Plus-Organic and Manure Master Conditioner can be approved for organic production. Growers/producers are encouraged to contact their organic certifier before using these products.

WARNING: Disturbing hog pits and/or pit foam can result in the release of **FLAMMABLE GASES**. Before application of this product, please ensure proper ventilation to prevent the accumulation of flammable gases and extinguish all potential ignition sources, including heaters, electrical, do not smoke, etc. Failure to follow these instructions may result in a fire or explosion. Fire or explosions can lead to property damage, personal injury or loss of life.

Manure Master™ Conditioner

A dry manure detoxifying & biological stimulant technology

Manure Conditioner is supplied in 50lb. bags to be added to the manure pits to speed up the digestion process (decomposition) or breakdown of the manure matter so it can be tied up into an organic liquid state.

Manure Conditioner is labeled: Naturally-occurring unaltered oxidized lignite. (no manufacturing process)

We recommend Maure Conditioner for new start-ups or troublesome pits dealing with the following issues:

- Top crust
- Bottom solids
- History of foam
- Flies
- Odors

Mode of Application and usage rate: open and dump bags through the slats into the manure pits around the waters or pump-outs. By applying into these areas, water and wetting will speed up the solubilizing process.

Usage Rate is 500lbs. (10 bags) per million applied at start up and to be used in conjunction with Manure Master Plus-PA for maximum manure decomposition.

Mode of Action: Manure Conditioner works by settling to the bottom of the manure pit in the anaerobic zone. Once water or manure slurry comes into contact, it will start solubilizing and releasing humic acid and lower the pH of the manure pit. This process will “wake up” or “speed up” the native anaerobes into functioning and doing their geared job of breaking down the organic matter in the pit.

Additional benefits of using Manure Conditioner:

- Assists speeding up the manure decomposition in areas of the pit an agitator can't reach.
- Helps reduce toxic odors by the chelation process of bonding ions and molecules to neutralize.
- Contains protozoa to help breakdown of more fibrous animal diets.
- Helps deter flies from bedding eggs into the manure.
